

Lars Dyrskjøl is a Professor of Molecular Medicine at Aarhus University in Denmark. He leads a research group at the Department of Molecular Medicine at Aarhus University Hospital, where his team focuses on translational bladder cancer research.

Dr. Dyrskjøl's research is primarily centered on translational bladder cancer, with a particular emphasis on biomarker models for predicting treatment outcomes in both early and late-stage bladder cancer. His work also includes liquid biopsy analysis for monitoring early relapse and therapy response, as well as understanding disease biology, tumor subtypes, and tumor evolution.

In addition to his research, Dr. Dyrskjøl is an active member of several scientific committees and advisory boards, including the Scientific Congress Office of the European Association of Urology (EAU) and the International Bladder Cancer Network (IBCN).
